

ICT Adoption Strategy: PHASE 2

1:1 VERSUS Shared Devices

Having computing devices in the classroom provides many opportunities for learners. Often as teachers we struggle with managing the number of devices in the classroom. There are benefits with shared devices as well as when using 1:1 devices.

Benefits with 1:1 devices:

- the ability for learners to learn, create, share, and collaborate anywhere and at any time,
- flexibility when it comes to sharing learner work,
- allowing learners to get feedback and input from peers and teachers
- being able to offer a wider range of personalized learning experiences

Benefits of shared devices:

- Collaboration and critical thinking
- Participate in meaningful conversations
- Negotiation skills and collaborative decision-making
- Increases learner engagement
- Differentiated learning practices
